**PREFACE**

This report presents the 2017 Annual Agricultural Survey results. The survey is part of a series of household surveys carried out by Statistics Botswana through the Agricultural Statistics Unit (ASU) in collaboration with the Department of Agricultural Research, Statistics and Policy Development (DARSPD) of the Ministry of Agricultural Development and Food Security.

The aim of the agricultural surveys is to provide time series data on key production indicators in the livestock and crop sub-sectors for evidence-based decision-making, development planning as well as to monitor and evaluate Government development programmes and projects.

I wish to acknowledge all those who contributed to the successful completion of this survey. In particular, I would like to thank the Ministry of Agricultural Development and Food Security for their partnership in this exercise and farmers for their invaluable time and cooperation to provide data to our enumerators.

For more information and further enquires, contact the Directorate of Stakeholder Relations at 3671300. All Statistics Botswana publications are available on the website at [www.statsbots.org.bw](http://www.statsbots.org.bw) and at Statistics Botswana Library (Head-Office, Gaborone).

'0'	Denotes a number too small to be rounded
'-'	Not Applicable
'( )'	Denotes a negative number

## EXECUTIVE SUMMARY

Agriculture in Botswana consists of two distinct sectors, namely the commercial and the traditional sectors. The Annual Agricultural Survey carried out in 2017 covered only the traditional sector because of lack of resources and other administrative logistics. This report therefore presents the 2017 survey results for the traditional sector only.

The results of the 2017 Annual Agricultural Survey depict improved trends between livestock and crop production within the traditional sector. Livestock production especially cattle continued to decline in 2017, while arable production showed a marked improvement in all the major crops compared to the 2015 agricultural census results. The good performance of the crop sector is attributable to the good rains received during the 2017 agricultural season as well as the input subsidies provided by government.

Cattle population dropped from 1.4 million in 2015 to 1.1 million in 2017. The decline in cattle population is attributed to an increase in cattle lost due to straying as well as stock theft. Cattle losses increased significantly from 48, 571 in 2015 to 79,799 in 2017. This implies that most cattle are lost due to straying or theft. Cattle birth rate also decreased from 57.9 percent to 47.3 percent. However, mortality rate declined from 7.1 percent to 5.9 percent and off-take rate also declined from 6.6 percent to 5.5 percent.

During the period under review, the goat population increased from 1.1 million in 2015 to 1.2 million in 2017. Notwithstanding this increase, the birth rate of goats dropped from 43.6 percent to 39.1 percent and the mortality rate also increased significantly from 16.7 percent to 23.3 percent while off-take rate improved from 7.1 to 7.3 percent.

The sheep population also increased from 214,234 to 234,621 during the same period. However, sheep experienced a decrease in birth rate from 36.7 percent to 33.6 percent between 2015 and 2017 agricultural seasons, while the mortality rate increased to 16.1 percent in 2017 from 11.7 percent recorded in 2015. Furthermore, the off-take rate dropped tremendously from 6.2 to 3.9 percent.

On the other hand, the sub-crop sector experienced a good harvest according to the 2017 survey results compared to 2015 agriculture census results for the traditional sector. Sorghum production tripled from 1,927 metric tons in 2015 to 5,975 metric tons in 2017, maize production realized a massive increase from 1,417 metric tons to 13,911 metric tons, millet production also doubled from 513 metric tons to 1,099 metric tons. Furthermore, the production of beans/pulses tripled from 796 metric tons to 2,348 metric tons between the 2015 and 2017 agricultural seasons. Compared to the 2015 agricultural census results, there was more area planted and area harvested for all the crops in 2017 except for millet. The crop sector recorded substantially high yields during the 2017 cropping season compared to the 2015 agricultural census, in terms of yield per hectare planted and yield per hectare harvested. The increase in production is mainly attributed to the good rains received coupled with modern farming practices.

## CHAPTER 1: INTRODUCTION

Agriculture plays an important role in rural development by providing food, income and employment for the majority of the rural dwellers. In Botswana, agriculture has potential for growth and creation of employment opportunities particularly for the unskilled and semi-skilled people. However, the sector is not performing optimally due to recurring droughts, losses due to straying, stock theft and endemic animal diseases such as Foot and Mouth Disease (FMD). Nevertheless, agriculture still remains a viable option for poverty reduction and employment creation because it is labor intensive.

This report provides statistics on a wide range of agricultural production indicators with the view of facilitating evidence-based decision-making, policy development and monitoring and evaluation of agricultural development programs. In the livestock sub-sector, the report provides information on birth rates, off-take rates, death rates, number of holdings and livestock population, to name a few. In the arable sub-sector, production indicators include area planted, area harvested, production and yield per hectare. Information on the agricultural holder characteristics such as gender and age are also covered.

The following chapter provides a detailed analysis of the 2017 survey results focusing exclusively on the traditional or subsistence sector.

## CHAPTER 2: ANALYSIS OF THE RESULTS

### 2.1 Agricultural Holders Characteristics

The results of the survey indicate that in the 2017 agricultural season, male farmers continued to dominate farming at 62.1 percent compared to their female counterparts with only 37.9 percent participation (Table 3.1). There was an increase in the average farm wage from P832 in 2015 to P967 in 2017. This shows that most farmers provided enough incentive for workers to remain employed on the farms. It is worth noting that the average wage in both years was above the minimum wages approved by Government of P550 and P700 for 2015 and 2017 respectively. According to the 2017 Annual Agricultural Survey results, the majority of farm workers were permanent workers at 92.1 percent (Table 3.20).

The results show that, 22.7 percent of the farmers employed farm workers during the 2017 agricultural season (Table 3.17). The majority of these farm workers are males accounting for 93.3 percent and about 54.4 percent of these workers have never been married (Table 3.18).

The participation of the youth in agriculture is still low according to the 2017 survey results. Out of a total of 58,974 traditional farmers/holders countrywide, only 5.7 percent were aged between 15 and 35 years. The majority of farmers (32.9 percent) were in the age group above 65 followed by those in the 55-59 years category at 13.7 percent (Table 3.5).

### 2.2: Livestock Statistics

Livestock statistics comprise of cattle, goats, sheep, donkeys/mules, horses, pigs, ostriches, chicken and others, but this summary will only concentrate on the three major ones in Botswana, being cattle, goats and sheep.

**Table 2.2a: Livestock Holdings. Population and Indicators from 2015 to 2017**

INDICATORS	2015	2017
	Traditional	Traditional
Total Agric Holdings	62,975	58,974
CATTLE:- Total Cattle Holdings	37,753	33,819
Total Cattle	1,360,467	1,100,375
<b>Offtake rate (%)</b>	<b>6.6</b>	<b>5.5</b>
<b>Birth rate (%)</b>	<b>57.9</b>	<b>47.3</b>
<b>Death rate (%)</b>	<b>7.1</b>	<b>5.9</b>
GOATS:- Total Goats Holdings	43,853	58,332
Total Goats	1,143,251	1,199,661
<b>Offtake rate (%)</b>	<b>7.1</b>	<b>7.3</b>
<b>Birth rate (%)</b>	<b>43.6</b>	<b>39.1</b>
<b>Death rate (%)</b>	<b>16.7</b>	<b>23.3</b>
SHEEP:- Total Sheep Holdings	12,362	12,992
Total Sheep	214,234	234,621
<b>Offtake rate (%)</b>	<b>6.2</b>	<b>3.9</b>
<b>Birth rate (%)</b>	<b>36.7</b>	<b>33.6</b>
<b>Death rate (%)</b>	<b>11.7</b>	<b>16.1</b>

Table 2.2a above indicates that the 2017 agricultural season registered a decrease in cattle population and an increase in goats and sheep population compared to the 2015 agricultural season. Cattle population reduced to 1.10 million in 2017 from 1.4 million in 2015. For the same period, goats' population increased from 1.1 million to 1.2 million and sheep population also increased from 214,234 to 234,621. It is worth noting that, goat rearing is most popular with 98.9 percent compared to 57.3 percent for cattle and 22.0 percent for sheep (Table 2.2a).

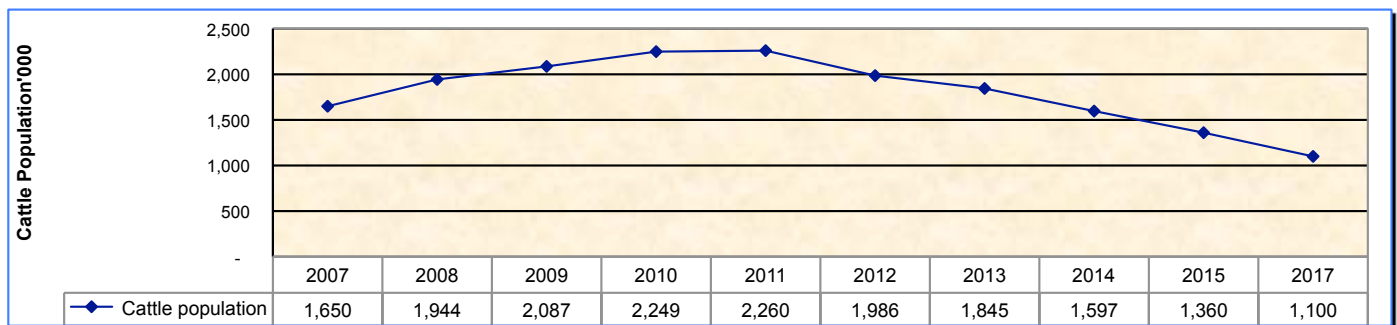

In terms of gender parity, the 2017 survey results reveal that males are the majority owners of livestock in the traditional sector. They own 73.1 percent of cattle, 62.1 percent of goats and 72.7 percent of sheep (Tables 4.1A, 5.1A and 5.7). The Central Serowe/Palapye district has the highest number of cattle population at 226,510 while Kweneng East district has the highest number of goats at 229,647 and sheep at 46,360. For the past years, Central region has been dominating in terms of livestock population but Kweneng East district is now leading in respect of goats and sheep population.

Supplementary feeding is not widely used in the traditional sector. Only 26.0 percent of cattle farmers practiced supplementary feeding while 16.9 percent and 24.9 percent of goats and sheep farmers respectively used supplementary feeds (Table 3.14). Notably, 59.7 percent of cattle farmers vaccinated their animals against various diseases (Tables 3.15).

## 2.2.1 Cattle Holdings and Population

Cattle holdings under traditional sector have decreased from 37,753 in 2015 to 33,819 in 2017 as indicated in Table 2.2a. This was accompanied by a decline in the cattle population as shown in Figure 2.2.1 below. This indicates that less farmers engaged in cattle farming in 2017 compared to 2015.

Figure 2.2.1: Cattle Population Trend (000): 2007 - 2017

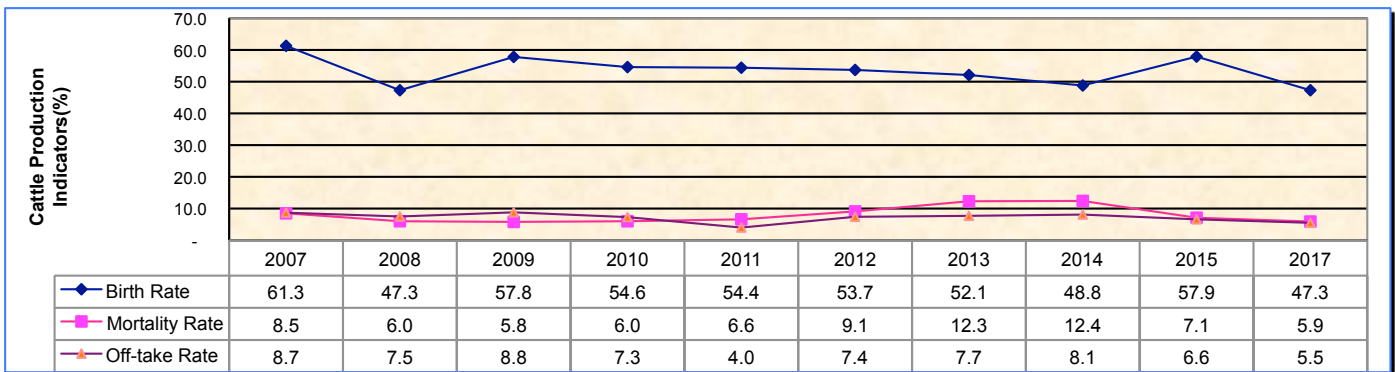

### 2.2.1A Cattle Production Indicators (birth, death and off take rates).

During the period under review, cattle mortality rates decreased from 7.1 percent to 5.9 percent (Table 2.2a). This implies that there was a reduction in cattle deaths and this might be attributed to good farming practices. Cattle off-take rates decreased from 6.6 percent in 2015 to 5.5 percent in 2017, indicating lower cattle sales in this period compared to 2015.

There is still potential to improve the performance of cattle farming in the traditional sector by improving both birth and off-take rates and reducing mortality rates.

Figure 2.2.1A below provides an illustration of the performance of the cattle industry over the past ten year period. The birth rate oscillated between 47.3 and 61.3 percent. The birth rate was highest in 2007 and lowest in 2008. From 2009, the birth rate decreased steadily from 57.8 percent to 48.8 percent in 2014. However, in 2015, the birth rate increased to 57.9 percent before dropping to 47.3 percent in 2017. Over the ten year period, both the off-take and mortality rates remained below 10 percent except in 2013 and 2014, where the mortality rate increased above 10 percent to 12.3 and 12.4 percent respectively.

**Figure 2.2.1A: Traditional Sector: Cattle Production Indicators Trends: 2007 – 2017**

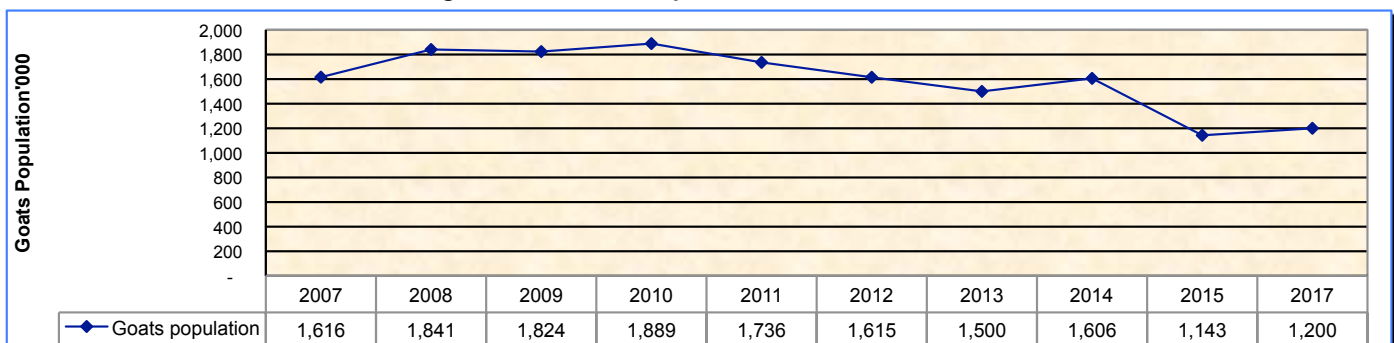

## 2.2.2 Goats Holdings (Farmers) and Population

Goats holdings increased from 43,853 in 2015 to 58,332 in 2017 (Table 2.2a). Likewise, the population of goats went up from 1.1 million to 1.2 million during the same period. However, goats' population dropped tremendously from 1.6 million in 2014 to 1.1 million in 2015 but increased to 1.2 million in 2017. The decline in goats' population is as a result of increased death rates.

As shown in Figure 2.2.2 below, goats' population has been above 1.6 million except in 2013, 2015 and 2017 where it dropped to 1.5 million, 1.1 million and 1.2 million respectively.

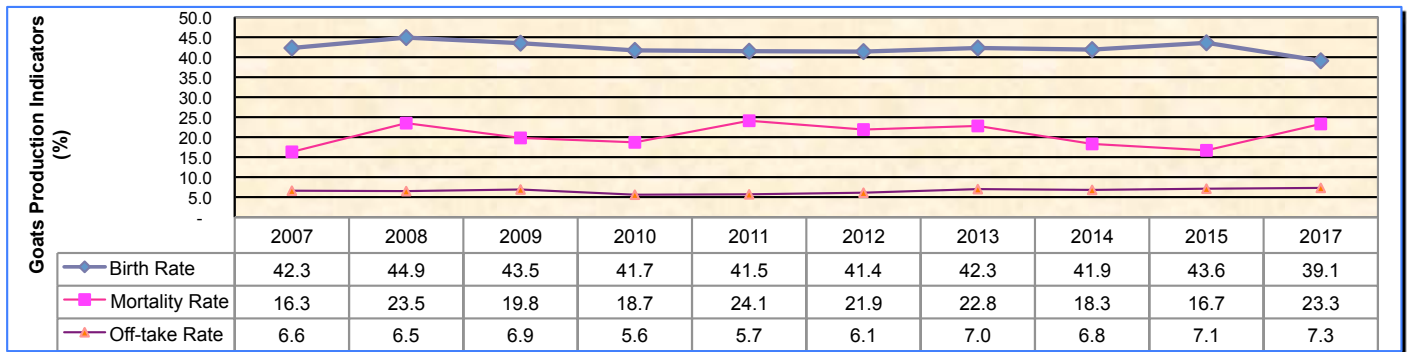

**Figure 2.2.2: Goats Population Trend: 2007 – 2017**

The birth rate of goats between 2007 and 2017 has varied between 41.4 percent and 44.9 percent except in 2017 where it dropped to 39.1 percent. The year 2008 recorded the highest birth rate at 44.9 percent. The mortality rate has also been unstable over a ten year period, and recorded a lower rate of 16.3 percent in 2007. However, mortality rate fluctuated between 16.3 and 24.1 percent. The figure 2.2.2A below shows that mortality rate increased tremendously from 16.3 percent in 2015 to 23.3 percent in 2017 and this could be the reason for a moderate increase in goats' population.

The off-take rate remained almost constant, it has slightly increased from 7.1 to 7.3 percent in 2015 and 2017 agricultural seasons. Off-take rate fluctuated between 5.6 and 7.3 percent since 2007.

**Figure 2.2.2A: Traditional Sector: Goats Production Indicators Trends: 2007 – 2017**

### 2.2.3 Sheep Holdings and Population

Between the 2015 and 2017 agricultural seasons, the number of sheep holdings in the entire sector increased to 12,992 from 12,362. The sheep population also increased from 214,234 to 234,621. Kweneng East district recorded the highest population of sheep in 2017 while Ghanzi district trailed behind all the districts (Table 5.7).

**Figure 2.2.3: Sheep Population Trend (000): 2007 – 2017**

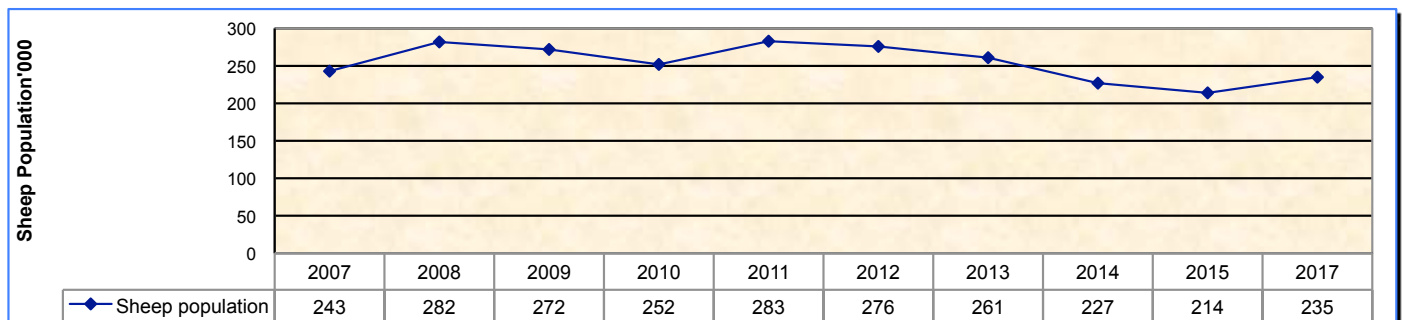

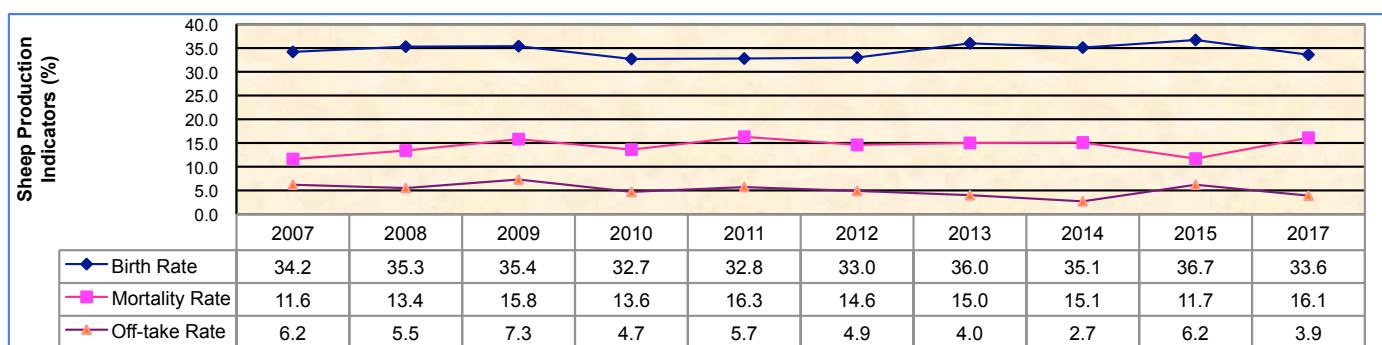

Figure 2.2.3A below gives the trend of the sheep production indicators over the past ten years. The birth rate remained above 32.0 percent, reaching the highest mark of 36.7 percent in 2015 before dropping to 33.6 percent in 2017.

The mortality rate was highest in 2011 at 16.3 percent and lowest in 2007 at 11.6 percent. 2017 survey year recorded an increased mortality rate of 16.1 percent.

Off-take rate oscillated between 2.7 and 7.3 percent.

**Figure 2.2.3A: Traditional Sector: Sheep Production Indicators Trends: 2007 – 2017**

## 2.3 Crop Statistics

This section gives a summary of crop statistics for 2015 and 2017 cropping seasons. Crops covered include sorghum, maize, millet, beans/pulses, sunflower, groundnuts and others. The discussion will mainly focus on the four major crops namely sorghum, maize, millet and beans/pulses.

### 2.3.1 Total Holdings, Total Area Planted and Harvested

Table 2.3.1 below presents total land holdings and land area, total crop holdings and area planted, total holdings harvested and total area harvested in 2015 and 2017 agricultural seasons.

**Table 2.3.1: Total Holdings, Area Planted & Harvested from 2015 - 2017**

INDICATORS	TRADITIONAL SECTOR	
	2015	2017
Land Holdings	41,043	35,173
Holdings Planted	30,150	33,399
Total Land Area (ha)	204,965	135,315
Total Area Planted (ha)	123,251	126,821
Total Area Harvested (ha)	32,641	92,942
Fallow Land Area	81,714	8,494
% Land Area not Planted	39.9	6.3

In 2017 annual agricultural survey, the number of farmers with land for planting showed a decrease from 41,043 in 2015 to 35,173 in 2017. However, area planted increased from 123,251 ha in 2015 to 126,821 ha in 2017. Also there is an increase in crop production indicators which was attributed to the good rainfall recorded during the 2016/17 cropping season.

A graphical presentation of land holdings, holdings planted and holdings harvested trend from 2007 to 2017 for the traditional sector is given as Figure 2.3.1A, while land area, area planted and harvested trend is presented in Figure 2.3.1B.

**Figure 2.3.1A: Traditional Sector: Land Holdings, Holdings Planted and Harvested Trends: 2007 - 2017**

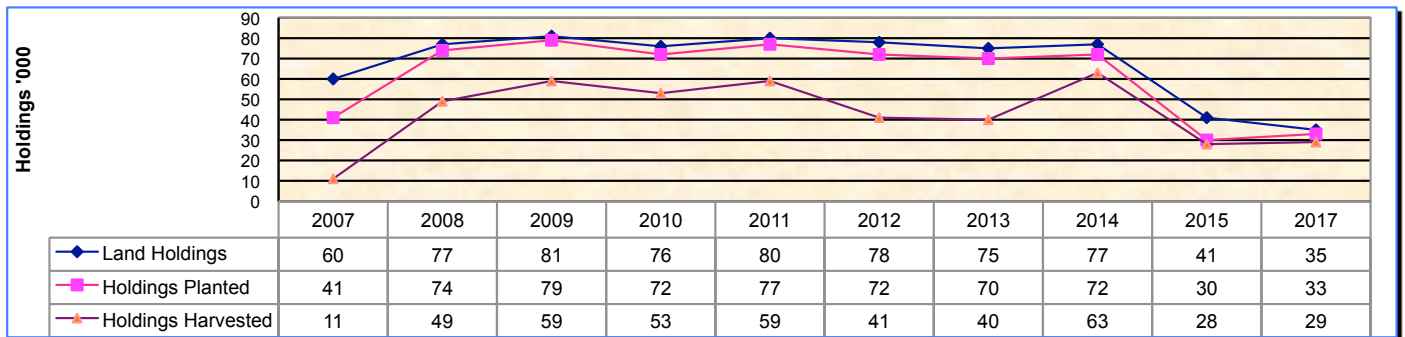

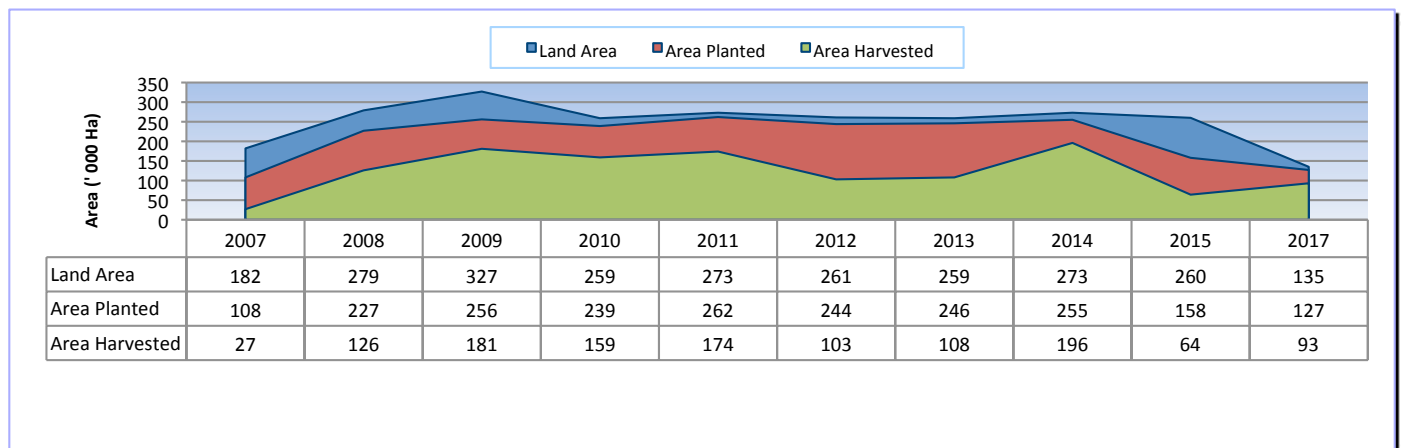

Figure 2.3.1B below presents Land area, area planted and area harvested. The trends fluctuated with sharp decreases and slight increases between years. Compared to the 2015 agricultural season, 2017 experienced an increase in area harvested but decrease in both land area and area planted.

**Figure 2.3.1B: Traditional Sector: Land Area, Area Planted & Harvested Trends: 2007 - 2017**

### 2.3.2 Crops Planted and Harvested

Maize, sorghum, millet and beans/pulses are the major crops in terms of area planted (Table 2.3.2). Maize has remained the predominant crop in the traditional sector, with the total area planted of 61,706 ha in 2017 and 61,803 ha in 2015. Pulses/beans is the second predominant crop with the total area of 22,573 ha and 27,251 ha in 2015 and 2017 respectively.

Crop yields per hectare during the period under review increased substantially for major crops. The traditional sector experienced an increase in the sorghum yields per hectare planted from 83kg/ha to 251kg/ha between 2015 and 2017 cropping seasons. For maize, the yield also increased from 23kg/ha to 106kg/ha in the same period while pulses also increased from 35kg/ha to 86kg/ha during the same period. In general, the productivity per hectare has increased for all the crops between 2015 and 2017 cropping seasons. This was as a result of good rains experienced during 2016/17 cropping season.

**Table 2.3.2: Area Planted, Harvested, Production and Yields; 2015 and 2017**

	INDICATORS	TRADITIONAL SECTOR	
		2015	2017
<b>Sorghum</b>	Total Sorghum Holdings	18,226	19,859
	Total Area Planted(ha)	23,223	23,766
	Area Harvested (ha)	7,925	16,512
	Production (Metric Tons)	1,927	5,975
	Yield Per hectare Planted	83	251
	Yield Per Hectare Harvested	243	362
<b>Maize</b>	Total Maize Holdings	31,154	34,828
	Total Area Planted(ha)	61,803	61,706
	Area Harvested (ha)	13,318	51,030
	Production (Metric Tons)	1,417	13,911
	Yield Per hectare Planted	23	225
	Yield Per Hectare Harvested	106	273
<b>Millet</b>	Total Millet Holdings	6,565	6,243
	Total Area Planted(ha)	4,981	3,118
	Area Harvested (ha)	2,750	2,538
	Production (Metric Tons)	513	1,099
	Yield Per hectare Planted	103	352
	Yield Per Hectare Harvested	187	433
<b>Pulses/Beans</b>	Total Beans/Pulses Holdings	36,595	35,628
	Total Area Planted(ha)	22,573	27,251
	Area Harvested (ha)	5,639	15,701
	Production (Metric Tons)	796	2,348
	Yield Per hectare Planted	35	86
	Yield Per Hectare Harvested	141	150

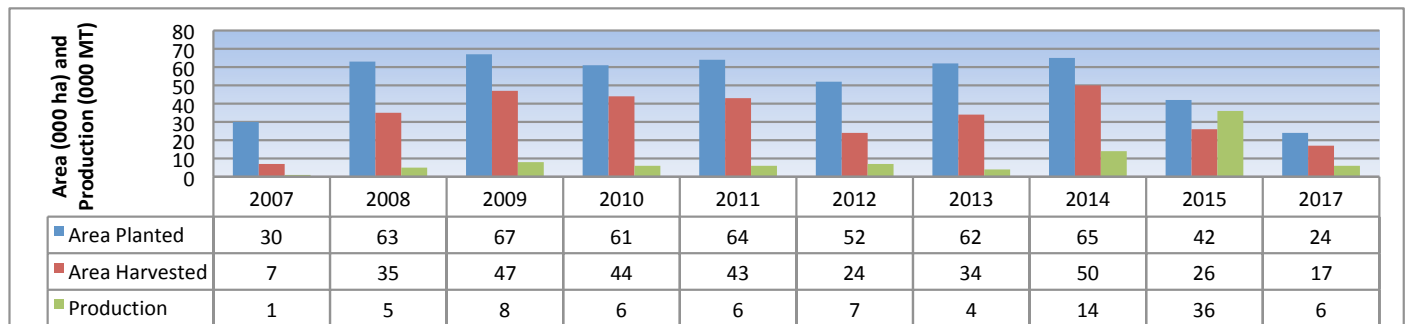

### 2.3.2.1 Sorghum

The total number of farmers who planted sorghum increased by 9.0 percent from 18,226 in 2015 to 19,859 in 2017 (Table 2.3.2). The total area planted under sorghum also went up by 2.3 percent from 23,223 hectares to 23,766 hectares. Likewise, area harvested increased from 7,925 hectares to 16,512 hectares. Total sorghum production also went up to 5,975 metric tons in 2017 compared to 1,927 metric tons in 2015.

Yield per hectare planted also increased from 83kg/ha in 2015 to 251kg/ha in 2017.

Figure 2.3.2.1 below shows area planted, area harvested and production trends for sorghum in the traditional sector over a period of ten years, starting in 2007.

**Figure 2.3.2.1: Traditional Sector: Area planted, Area Harvested & Production Trends – Sorghum: 2007 – 2017**

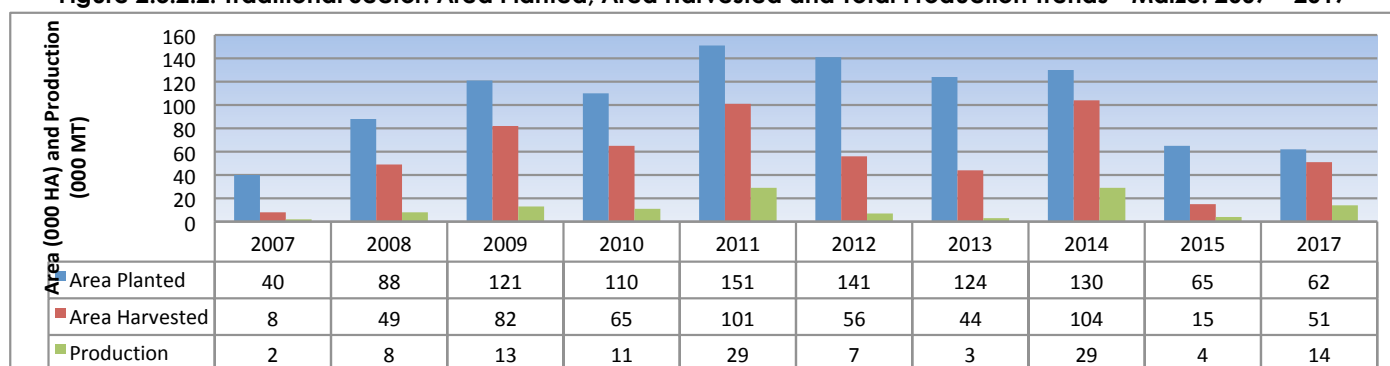

### 2.3.2.2 Maize

The number of farmers who planted maize increased from 31,154 in 2015 to 34,828 in 2017 (Table 2.3.2). During the same period, area planted decreased slightly from 61,803 to 61,706 hectares. More farmers therefore planted maize as compared to sorghum, and likewise there was more area planted under maize than sorghum between 2015 and 2017 cropping season. Even though maize is more susceptible to extreme weather conditions, farmers preferred maize mainly because it is not vulnerable to Quelea birds.

Area harvested also increased from 13,318 hectares to 51,030 hectares, coupled with a sharp increase in production from 1,417 metric tons in 2015 to 13,911 metric tons in 2017 as shown in Table 2.3.2. The increase in production is attributed to good rains received in 2016/17 cropping season.

The figure 2.3.2.2 below reflects area planted, area harvested and production for maize from year to year. The production trends between 2007 and 2017 agricultural seasons are clearly illustrated.

**Figure 2.3.2.2: Traditional Sector: Area Planted, Area Harvested and Total Production Trends - Maize: 2007 – 2017**

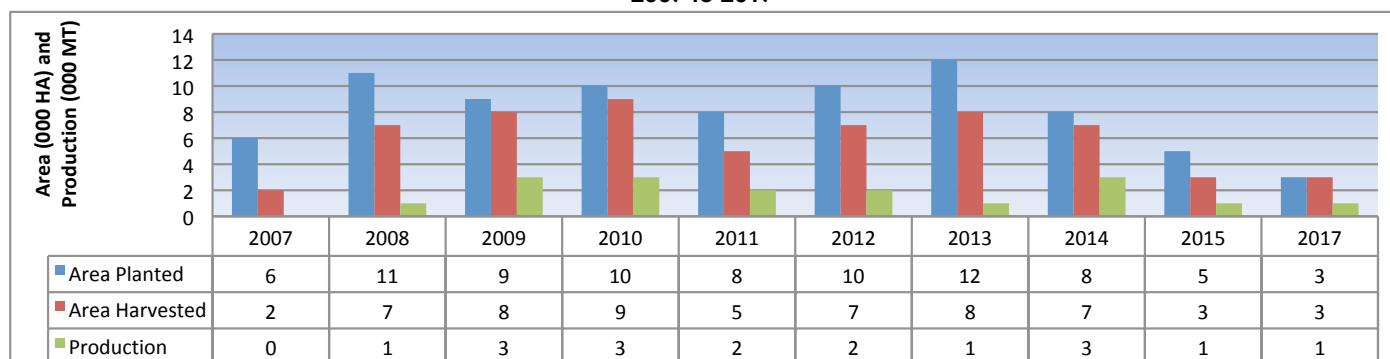

### 2.3.2.3 Millet

The total number of farmers who planted millet decreased from 6,565 in 2015 to 6,243 in 2017 (Table 2.3.2). The area planted also decreased from 4,981 hectares in 2015 to 3,118 hectares in 2017, while area harvested also decreased from 2,750 hectares in 2015 to 2,538 hectares in 2017.

Despite a decrease in the area planted from 4,981 hectares in 2015 to 3,118 hectares in 2017, total production of millet increased by 114.2 percent from 513 to 1,099 metric tons. The yield per hectare planted also increased from 103kg/ha in 2015 to 352kg/ha in 2017 (Table 2.3.2). Comparatively in terms of yield in the traditional sector, millet is doing better than sorghum and maize.

The figure 2.3.2.3 below provides an illustration of area planted, area harvested and total production for millet from 2007 to 2017 cropping seasons.

**Figure 2.3.2.3: Traditional Sector-Millet: Area Planted, Area Harvested (HA), and Total Production (Metric Tonnes) from 2007 to 2017**

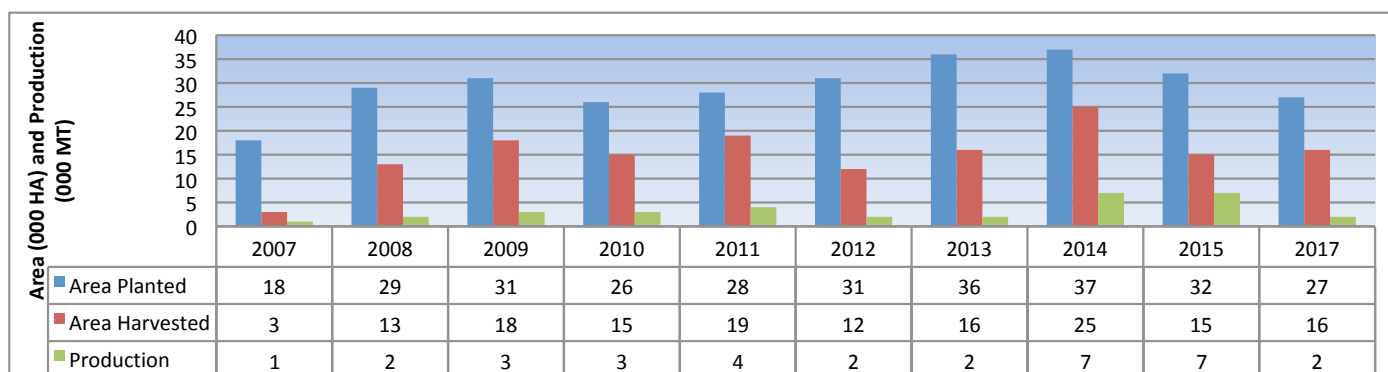

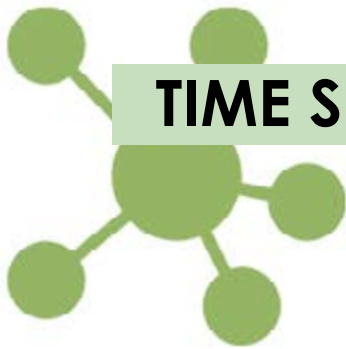

### 2.3.2.4 Beans/Pulses

The number of farmers who planted beans/pulses decreased by 2.6 percent from 36,595 in 2015 to 35,628 in 2017. Area planted also went up by 20.7 percent while area harvested increased by 54.8 percent as well during the same period (Table 2.3.2). Pulses production tripled from 796 metric tons in 2015 to 2,348 metric tons in 2017. The yield per hectare planted increased sharply from 35kg/ha in 2015 to 86kg/ha in 2017.

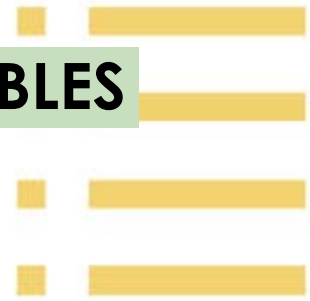

Figure 2.3.2.4 shows area planted, area harvested and production for pulses on an annual basis from 2007 to 2017.

**Figure 2.3.2.4: Traditional Sector-Pulses: Area Planted, Area Harvested (HA), and Total Production (Metric Tonnes) Trends from 2007 to 2017**

Figures for 1991 -1992, 1994 not available, 2001, 2014 and 2017 are traditional sector only.

A blue pen is positioned diagonally across the frame, pointing towards a bar chart on a document. The chart features several horizontal bars with segments in light blue, red, and tan. The background is a blurred wooden surface. A green rectangular box is overlaid on the chart, containing the title text.

A photograph of a sorghum field under a clear sky. The plants are arranged in neat rows, with a narrow, shallow irrigation channel or furrow running down the center. The plants are lush green, and their long, narrow leaves are clearly visible. The ground between the rows is dark and appears to be soil. The overall scene depicts a well-maintained agricultural field.

**TRADITIONAL SECTOR: CROP PRODUCTION**
